

DanVit

DanWean[®]

A UNIQUE MILK SOLUTION FOR YOU

Reduce the use of nursing sows

▼ Achieve a wide range of benefits by installing a DanVit milkfeeding system in the farrowing pens.

You can have more piglets at each individual sow, thus reducing the number of nursing sows. Weaning the individual piglet will be easier, as the piglet achieves a higher entry weight in the early weaning section.

The unique thing about DanVit's milkfeeding system is that the milk powder is continuously mixed around the clock on the basis of mixing recipes.

The system's PLC control ensures that the system automatically controls the weighing and stirring procedure. The milk is distributed to the individual pens by a circulation system. This is to ensure the quality of the milk, even in the small stabel sections with a lower consumption.

The logically constructed PLC control is easily operated via a touch screen. Here you have the full overview.

Simple menu with icons for easy comprehension across languages. Easy to adjust in mixing ratios

Automatic application of soap and acid during cleaning procedure

A healthy start for your piglets

THE ADVANTAGES OF A MILKFEEDING SYSTEM

- ▼ Precise automatic mixings using weighing cells
- ▼ New mixing startups with small residue in the tank
- ▼ Simple control panel for PLC control
- ▼ Scalding and rinsing the tank with each mixing
- ▼ Reliability
- ▼ Fully automatic washing
- ▼ Save working hours

	Without using a Milk feeding system	Efficiency by use of DanWean® PrimaMilk
Sow unit:		
Weaning pr sow (withour nursing sows)	11,5-13,5 piglets	13,5-15 piglets
Nursing days	32 days	28 days
Weaning weight	5,5-6,0 kg	6,8-8,2 kg
Early weaning section:		
Sales weight	28 kg	31 kg
Sold piglets pr sow		+3

DANWEAN - A DANVIT DEVELOPED PRODUCT

Milkpowder for piglets

The advantages of choosing DanWean[®] milkpowder

- ▼ High quality raw materials which is carefully selected
- ▼ Products with a high content of milk - no or very low content of vegetable proteins
- ▼ Healthy growth from birth

You will get a fixed raw material composition, based on the quality of the milk raw materials. This gives you a good experience with uniformity both in dairy farms and with the pigs.

A milk substitute based on skimmed milk with no compromises on the raw material selection and digestibility. The mixture is also suitable even for the very small piglets and a short weaning time

Added minerals and vitamins for the best possible well-being for the piglets. We only use coconut/palm fat that resembles the fat in the sow's milk and ensures a high energy absorption

The milk is fortified with well-known lactic acid bacteria and acids for optimal gastric intestinal health and durability

DanWean®

PrimaMilk^{Pro}

DanWean® PrimaMilk^{Pro} is a high quality milk product as close to the sow's own milk as possible.

DanWean® PrimaMilk^{Pro} is recommended for use in milk feeding systems and milk cups in the farrowing pen.

DanWean PrimaMilk^{Pro}

% content

Milk Rawmaterial	Lactose	Protein / Fat	Protein content	Probiotics	Soluble	Mixing ratio
87	40	18/17	Milk	Yes	Yes	130 g + 1L water

▼ QUALITY

DanWean® PrimaMilk^{Pro} contains especially tasty and highly digestible milk proteins, which ensures optimal growth. DanWean® PrimaMilk^{Pro} is uniquely uniform and it is composed of easily soluble raw materials that makes it a perfect fit for a milk feeding system.

DanWean® PrimaMilk^{Pro} has a high content of skimmed milk powder and is added acid and aroma, minerals and vitamins.

▼ OPTIMAL GROWTH

The recognized lactic acid bacteria stabilizes the intestinal flora and ensure healthy pigs. With DanWean® PrimaMilk^{Pro}, all piglets has a constant access to fresh milk as a supplement to the sow's own milk. The piglets are both healthier and stronger and the mortality is reduced.

DanWean® PrimaMilk^{Pro} is a complete blend with the best raw materials, when used in milk feeding systems will ensure an optimal growth and create good results.

▼ DANISH PIG GENETIC

Danish pig genetics is highly developed and the litter size is also growing. Therefore it's important that all piglets in the litter has the best opportunities for fresh milk, so the piglets get the best conditions for a healthy and strong life.
